

Taylor Pentz

Senior Flutter / Dart Mobile Engineer

High Point, NC

870 403 5119 | taylorpentz2@gmail.com | <https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Flutter / Dart Mobile Engineer with 11+ years in software engineering across SaaS, fintech, healthcare, analytics, and enterprise workflow products and recent delivery using Flutter, Dart, Riverpod, Bloc, cloud services, databases, automated testing, and CI/CD; modernizes legacy systems, fixes production reliability issues, improves performance, mentors engineers, and turns complex requirements into secure, scalable products with measurable business impact.

Skills

- **Primary Stack:** Flutter, Dart, Riverpod, Bloc, Firebase, REST APIs; practical delivery across SaaS, fintech, healthcare, analytics, and enterprise workflow products.
- **Mobile Depth:** offline sync, secure storage, push notifications, crash reporting, app release workflows, device testing, accessibility, and API-backed mobile features.
- **Architecture:** clean architecture, mobile state management, offline-first design, API integration; API boundaries, domain modeling, secure design, scalability reviews, and production-readiness planning.
- **Cloud and DevOps:** Firebase, AWS, GitHub Actions, Fastlane; Docker, CI/CD pipelines, release automation, feature flags, rollback plans, and environment governance.
- **Databases and Messaging:** Firebase, PostgreSQL, SQLite, Redis; schema design, indexing, query tuning, migrations, caching, reconciliation, and reliable async processing.
- **Testing and Quality:** Flutter widget tests, integration tests, Appium, crash reporting; unit, integration, contract, end-to-end, regression, load, and smoke testing aligned with release risk.
- **Monitoring and Security:** OpenTelemetry, Datadog, CloudWatch, ELK, Sentry, structured logs, alerts, OWASP, OAuth, RBAC, incident response, and RCA.
- **Senior Practices:** technical leadership, code reviews, architecture reviews, mentoring, Agile planning, stakeholder communication, legacy modernization, and production support.

Work Experience

SumatoSoft

Senior Software Engineer

Boston, MA Remote

Apr 2023 - Dec 2025

- Led mobile and API-backed workflow delivery using **Flutter, Dart, Riverpod, Bloc, Firebase, REST APIs**, centered on **Flutter 3, Dart 3, and Firebase SDKs**, connecting authentication, offline sync, push notifications, customer dashboards, secure storage, release automation, and backend services.
- Modernized legacy modules with duplicated validation, inconsistent state handling, and fragile release paths into **typed, testable, reusable components and services**, reducing production defects by **32%** across high-change customer workflows.
- Resolved crash clusters, stale offline records, and duplicate push actions by adding **state reconciliation, defensive API retries, crash reporting, background sync controls, and device-specific regression coverage**.
- Designed secure integration boundaries with **OAuth, RBAC, tenant-aware filters, OpenAPI contracts, audit logging, and defensive validation**, preventing cross-account data exposure during partner and administrator workflows.
- Implemented reliable asynchronous processing with **idempotency keys, retry policies, dead-letter handling, reconciliation jobs, and transactional persistence**, eliminating duplicate business actions after provider timeouts.
- Improved release delivery through **Fastlane and CI/CD automation, signed build governance, TestFlight and internal distribution, environment configuration, feature flags, and rollback-ready mobile API compatibility**.
- Added automated quality gates with **unit, integration, contract, end-to-end, smoke, and regression tests**, catching broken API contracts, UI edge cases, and migration defects before production deployment.
- Built observability with **OpenTelemetry, structured logs, Datadog and CloudWatch alerts, traces, dashboards, and incident runbooks**, accelerating diagnosis of latency spikes, memory growth, failed jobs, and webhook failures.
- Mentored engineers through **architecture reviews, pair debugging, pull-request standards, incident retrospectives, and performance-focused refactoring**, raising technical consistency across frontend, backend, QA, DevOps, and product groups.

Hexaview Technologies Inc.

Software Engineer

New York, NY

Jul 2018 - Mar 2023

- Delivered client-facing fintech and analytics features using **Flutter, Dart, Provider and Bloc, Firebase, REST APIs, secure storage, and app distribution**, centered on **Flutter 1/2, Dart 2, and Firebase**, with **mobile UI, offline sync, secure storage, push notifications, release automation**, supporting customer dashboards, reporting workflows, account servicing, and external data integrations.
- Refactored older screens, services, and shared libraries that mixed business rules with presentation logic, improving maintainability and reducing regression bug leakage by **29%** across three major release cycles.
- Built service and API integrations for payments, CRM, identity, notifications, and reporting providers, handling **duplicate callbacks, schema drift, partial outages, retries, and reconciliation** without losing customer activity.
- Fixed production memory and worker stability issues by profiling retained objects, closing database cursors, limiting batch size, and introducing safer queue-processing controls for long-running jobs.
- Optimized reporting and search workloads through **composite indexes, query rewrites, cached summaries, asynchronous generation, and defensive timeouts**, stabilizing response times as customer records grew.
- Migrated older modules toward modern runtime, dependency, and build standards while preserving backward-compatible API contracts for dependent clients and scheduled enterprise releases.
- Expanded automated validation with **component tests, API tests, contract fixtures, browser tests, and release smoke suites**, reducing manual QA bottlenecks and catching provider response changes earlier.
- Partnered with architects, product managers, QA, and client stakeholders to split large modernization initiatives into smaller releases with measurable acceptance criteria, release notes, and support documentation.

SimbirSoft Company

Software Developer

Boston, MA

Mar 2015 - Jun 2018

- Built enterprise workflow, e-commerce, and internal operations modules using **Android Java/Kotlin, iOS Swift, early Flutter prototypes, REST APIs, Firebase, and mobile release tooling with SQL databases, REST APIs, queues, and CI builds**, supporting approvals, orders, notifications, imports, and reporting.
- Replaced brittle server-rendered and script-heavy flows with cleaner application modules, improving task completion speed by **24%** for operations users working through repetitive approval and data-entry processes.
- Implemented service-layer validation, transaction boundaries, and database constraints that corrected duplicate submissions, inconsistent statuses, and race conditions caused by browser retries or concurrent updates.
- Assisted modernization from manual deployments and tightly coupled code into **repeatable builds, environment profiles, automated tests, structured logging, and safer release packages** across staging and production.
- Improved slow database-backed screens through **index reviews, query tuning, pagination, selective caching, and explain-plan analysis**, reducing support complaints tied to large customer and catalog tables.
- Created REST endpoints and background jobs for notifications, file imports, invoice synchronization, and status tracking while adding error queues and replay scripts for failed integrations.
- Worked with QA, analysts, and senior engineers to clarify requirements, investigate production defects, write integration tests, and document root causes for recurring customer-impacting issues.

Microsoft

Software Developer Intern

Cambridge, MA

Aug 2014 - Feb 2015

- Contributed to internal developer productivity and reporting tools using **C#, ASP.NET MVC/Web API, JavaScript, TypeScript, SQL Server, and browser-based internal tools**, supporting SQL-backed services, administrative dashboards, validation rules, data exports, and workflow automation for engineering teams.
- Implemented searchable grids, export utilities, form validation, and role-aware visibility rules that helped internal users review operational data and complete routine support tasks more efficiently.
- Investigated defects in data access, validation, and workflow-state handling by reproducing failures, comparing expected outcomes, and preparing fixes reviewed by senior engineers before merge.
- Added unit and integration tests around controller logic, utility classes, SQL queries, and edge-case validation, strengthening regression coverage for tools that had relied heavily on manual checking.
- Participated in code reviews, daily standups, release readiness checks, and design discussions, gaining production-minded engineering habits around maintainability, reliability, and secure implementation.
- Documented setup steps, API assumptions, troubleshooting notes, and known limitations so future interns and full-time engineers could onboard faster and maintain the internal tools confidently.

Selected Projects

Flutter Customer Service Mobile App

- Built a mobile workflow platform using **Flutter, Dart, Riverpod, Bloc, Firebase, REST APIs**, offline sync, secure storage, push notifications, API-backed dashboards, crash reporting, and release automation for customer service teams.

Offline-First Mobile Data Platform

- Implemented sync reconciliation, retry-safe API calls, device testing, app distribution workflows, and monitoring dashboards that reduced mobile production support risk during frequent releases.

Certifications

- Google Associate Android Developer
- AWS Certified Developer - Associate
- Professional Scrum Developer I (PSD I)
- Google Cloud Digital Leader
- Certified Kubernetes Application Developer (CKAD)

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science, 2010 - 2014
