

Taylor Pentz

Senior BigQuery / GCP Data Engineering

High Point, NC

870 403 5119 | taylorpentz2@gmail.com | <https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior BigQuery / GCP Data Engineer with 11+ years in software engineering across SaaS, fintech, healthcare, analytics, and enterprise workflow products and recent delivery using BigQuery, GCP, SQL, Python, cloud services, databases, automated testing, and CI/CD; modernizes legacy systems, fixes production reliability issues, improves performance, mentors engineers, and turns complex requirements into secure, scalable products with measurable business impact.

Skills

- **Primary Stack:** BigQuery, GCP, SQL, Python, Dataflow, dbt; practical delivery across SaaS, fintech, healthcare, analytics, and enterprise workflow products.
- **Data Depth:** ETL/ELT orchestration, lineage, schema evolution, dimensional modeling, streaming, data quality checks, BI semantic layers, and analytics reliability.
- **Architecture:** ETL/ELT, medallion architecture, dimensional modeling, streaming data, observability; API boundaries, domain modeling, secure design, scalability reviews, and production-readiness planning.
- **Cloud and DevOps:** AWS S3, RDS, Glue, Lambda; GCP BigQuery; Azure Data Factory; Docker, CI/CD pipelines, release automation, feature flags, rollback plans, and environment governance.
- **Databases and Messaging:** PostgreSQL, BigQuery, BigQuery, SQL Server, MySQL, Redis; schema design, indexing, query tuning, migrations, caching, reconciliation, and reliable async processing.
- **Testing and Quality:** Pytest, Great Expectations, dbt tests, data reconciliation, pipeline validation; unit, integration, contract, end-to-end, regression, load, and smoke testing aligned with release risk.
- **Monitoring and Security:** OpenTelemetry, Datadog, CloudWatch, ELK, Sentry, structured logs, alerts, OWASP, OAuth, RBAC, incident response, and RCA.
- **Senior Practices:** technical leadership, code reviews, architecture reviews, mentoring, Agile planning, stakeholder communication, legacy modernization, and production support.

Work Experience

SumatoSoft

Senior Software Engineer

Boston, MA Remote

Apr 2023 - Dec 2025

- Led data platform delivery for **governed reporting and operational data workflows** using **BigQuery, GCP, SQL, Python, Dataflow, dbt**, centered on **BigQuery, dbt 1.x, and Python 3.10+**, connecting ingestion, transformation, quality checks, semantic models, dashboards, and governed access.
- Modernized legacy modules with duplicated validation, inconsistent state handling, and fragile release paths into **typed, testable, reusable components and services**, reducing production defects by **32%** across high-change customer workflows.
- Resolved late pipelines, schema drift, duplicate records, and expensive queries by adding **incremental models, partitioning, validation checks, reconciliation jobs, lineage notes, and workload-aware scheduling**.
- Designed secure integration boundaries with **OAuth, RBAC, tenant-aware filters, OpenAPI contracts, audit logging, and defensive validation**, preventing cross-account data exposure during partner and administrator workflows.
- Implemented reliable asynchronous processing with **idempotency keys, retry policies, dead-letter handling, reconciliation jobs, and transactional persistence**, eliminating duplicate business actions after provider timeouts.
- Moved fragile deployments toward **Docker-based CI/CD, infrastructure checks, feature flags, environment promotion controls, and repeatable rollback procedures**, improving release confidence for distributed teams.
- Added automated data quality gates with **dbt tests, Pytest, reconciliation reports, contract checks, freshness alerts, and regression datasets**, catching broken transformations before executive reports were published.
- Built observability with **OpenTelemetry, structured logs, Datadog and CloudWatch alerts, traces, dashboards, and incident runbooks**, accelerating diagnosis of latency spikes, memory growth, failed jobs, and webhook failures.
- Mentored engineers through **architecture reviews, pair debugging, pull-request standards, incident retrospectives, and performance-focused refactoring**, raising technical consistency across frontend, backend, QA, DevOps, and product groups.

Hexaview Technologies Inc.

Software Engineer

New York, NY

Jul 2018 - Mar 2023

- Delivered client-facing fintech and analytics features using **Python, SQL, Airflow, Spark, dbt** where appropriate, **BigQuery, Kafka, BI dashboards, and data quality checks**, centered on **Python 3.7-3.9, Airflow 1/2, Spark 2.4/3, and SQL**, with **data quality, schema evolution, orchestration, BI semantic layers, APIs, cloud storage**, supporting customer dashboards, reporting workflows, account servicing, and external data integrations.
- Refactored older screens, services, and shared libraries that mixed business rules with presentation logic, improving maintainability and reducing regression bug leakage by **29%** across three major release cycles.
- Built service and API integrations for payments, CRM, identity, notifications, and reporting providers, handling **duplicate callbacks, schema drift, partial outages, retries, and reconciliation** without losing customer activity.
- Fixed production memory and worker stability issues by profiling retained objects, closing database cursors, limiting batch size, and introducing safer queue-processing controls for long-running jobs.
- Optimized reporting and search workloads through **composite indexes, query rewrites, cached summaries, asynchronous generation, and defensive timeouts**, stabilizing response times as customer records grew.
- Migrated older modules toward modern runtime, dependency, and build standards while preserving backward-compatible API contracts for dependent clients and scheduled enterprise releases.
- Expanded automated validation with **component tests, API tests, contract fixtures, browser tests, and release smoke suites**, reducing manual QA bottlenecks and catching provider response changes earlier.
- Partnered with architects, product managers, QA, and client stakeholders to split large modernization initiatives into smaller releases with measurable acceptance criteria, release notes, and support documentation.

SimbirSoft Company

Software Developer

Boston, MA

Mar 2015 - Jun 2018

- Built enterprise workflow, e-commerce, and internal operations modules using **SQL, Python, Pandas, PostgreSQL, MySQL, ETL scripts, scheduled jobs, Power BI reporting, and data quality checks** with **SQL databases, REST APIs, queues, and CI builds**, supporting approvals, orders, notifications, imports, and reporting.
- Replaced brittle server-rendered and script-heavy flows with cleaner application modules, improving task completion speed by **24%** for operations users working through repetitive approval and data-entry processes.
- Implemented service-layer validation, transaction boundaries, and database constraints that corrected duplicate submissions, inconsistent statuses, and race conditions caused by browser retries or concurrent updates.
- Assisted modernization from manual deployments and tightly coupled code into **repeatable builds, environment profiles, automated tests, structured logging, and safer release packages** across staging and production.
- Improved slow database-backed screens through **index reviews, query tuning, pagination, selective caching, and explain-plan analysis**, reducing support complaints tied to large customer and catalog tables.
- Created REST endpoints and background jobs for notifications, file imports, invoice synchronization, and status tracking while adding error queues and replay scripts for failed integrations.
- Worked with QA, analysts, and senior engineers to clarify requirements, investigate production defects, write integration tests, and document root causes for recurring customer-impacting issues.

Microsoft

Software Developer Intern

Cambridge, MA

Aug 2014 - Feb 2015

- Contributed to internal developer productivity and reporting tools using **Python scripts, C#, ASP.NET MVC/Web API, JavaScript, TypeScript, SQL Server, and internal Azure-hosted tools**, supporting SQL-backed services, administrative dashboards, validation rules, data exports, and workflow automation for engineering teams.
- Implemented searchable grids, export utilities, form validation, and role-aware visibility rules that helped internal users review operational data and complete routine support tasks more efficiently.
- Investigated defects in data access, validation, and workflow-state handling by reproducing failures, comparing expected outcomes, and preparing fixes reviewed by senior engineers before merge.
- Added unit and integration tests around controller logic, utility classes, SQL queries, and edge-case validation, strengthening regression coverage for tools that had relied heavily on manual checking.
- Participated in code reviews, daily standups, release readiness checks, and design discussions, gaining production-minded engineering habits around maintainability, reliability, and secure implementation.
- Documented setup steps, API assumptions, troubleshooting notes, and known limitations so future interns and full-time engineers could onboard faster and maintain the internal tools confidently.

Selected Projects

Cloud Data Platform and Analytics Modernization

- Delivered a governed analytics platform using **BigQuery, GCP, SQL, Python, Dataflow, dbt**, ingestion pipelines, transformation models, data quality checks, semantic reporting layers, and secure access controls for business users.

Reliable ETL and Business Reporting System

- Improved ETL reliability with incremental loads, schema validation, reconciliation reporting, freshness alerts, lineage documentation, and pipeline observability for executive and operational reporting.

Certifications

- AWS Certified Data Engineer - Associate
- Microsoft Certified: Azure Data Engineer Associate
- Databricks Certified Data Engineer Associate
- SnowPro Core Certification
- Professional Scrum Developer I (PSD I)

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science, 2010 - 2014
