

Taylor Pentz

Senior Mobile QA / Appium Testing Engineer

High Point, NC

870 403 5119 | taylorpentz2@gmail.com | <https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Mobile QA / Appium Testing Engineer with 11+ years in software engineering across SaaS, fintech, healthcare, analytics, and enterprise workflow products and recent delivery using Appium, Detox, Espresso, XCTest, cloud services, databases, automated testing, and CI/CD; modernizes legacy systems, fixes production reliability issues, improves performance, mentors engineers, and turns complex requirements into secure, scalable products with measurable business impact.

Skills

- **Primary Stack:** Appium, Detox, Espresso, XCTest, mobile automation, device farms; practical delivery across SaaS, fintech, healthcare, analytics, and enterprise workflow products.
- **Automation Depth:** test strategy, framework design, flaky-test control, API automation, browser/device coverage, CI quality gates, test data, and release risk reporting.
- **Architecture:** test automation architecture, risk-based testing, contract testing, CI quality gates; API boundaries, domain modeling, secure design, scalability reviews, and production-readiness planning.
- **Cloud and DevOps:** AWS, Azure DevOps, GitHub Actions, Jenkins, Docker; Docker, CI/CD pipelines, release automation, feature flags, rollback plans, and environment governance.
- **Databases and Messaging:** PostgreSQL, SQL Server, MongoDB, Redis, test data stores; schema design, indexing, query tuning, migrations, caching, reconciliation, and reliable async processing.
- **Testing and Quality:** Playwright, Cypress, Selenium, REST Assured, JUnit, TestNG, Appium, k6; unit, integration, contract, end-to-end, regression, load, and smoke testing aligned with release risk.
- **Monitoring and Security:** OpenTelemetry, Datadog, CloudWatch, ELK, Sentry, structured logs, alerts, OWASP, OAuth, RBAC, incident response, and RCA.
- **Senior Practices:** technical leadership, code reviews, architecture reviews, mentoring, Agile planning, stakeholder communication, legacy modernization, and production support.

Work Experience

SumatoSoft

Senior Software Engineer

Boston, MA Remote

Apr 2023 - Dec 2025

- Led test automation architecture for **product engineering teams** using **Appium, Detox, Espresso, XCTest, mobile automation, device farms**, centered on **Appium 2, Selenium 4, and device-farm testing**, aligning UI, API, mobile, performance, and release-quality coverage with delivery teams.
- Modernized legacy modules with duplicated validation, inconsistent state handling, and fragile release paths into **typed, testable, reusable components and services**, reducing production defects by **32%** across high-change customer workflows.
- Resolved flaky suites, slow pipelines, unstable test data, and environment mismatch failures by introducing **test isolation, retry controls, fixtures, service mocks, parallel execution, and failure reporting**.
- Designed secure integration boundaries with **OAuth, RBAC, tenant-aware filters, OpenAPI contracts, audit logging, and defensive validation**, preventing cross-account data exposure during partner and administrator workflows.
- Implemented reliable asynchronous processing with **idempotency keys, retry policies, dead-letter handling, reconciliation jobs, and transactional persistence**, eliminating duplicate business actions after provider timeouts.
- Moved fragile deployments toward **Docker-based CI/CD, infrastructure checks, feature flags, environment promotion controls, and repeatable rollback procedures**, improving release confidence for distributed teams.
- Added automated quality gates with **smoke, regression, contract, accessibility, performance, and API checks**, preventing high-severity workflow defects from reaching customer-facing releases.
- Built observability with **OpenTelemetry, structured logs, Datadog and CloudWatch alerts, traces, dashboards, and incident runbooks**, accelerating diagnosis of latency spikes, memory growth, failed jobs, and webhook failures.
- Mentored engineers through **architecture reviews, pair debugging, pull-request standards, incident retrospectives, and performance-focused refactoring**, raising technical consistency across frontend, backend, QA, DevOps, and product groups.

Hexaview Technologies Inc.

Software Engineer

New York, NY

Jul 2018 - Mar 2023

- Delivered client-facing fintech and analytics features using **Selenium, Cypress, Playwright for newer suites, Java, REST Assured, Postman, JUnit, and CI pipelines**, centered on **Selenium 3/4, Cypress, Java 8/11, and REST Assured**, with **test strategy, coverage design, flaky test reduction, regression automation, defect analytics**, supporting customer dashboards, reporting workflows, account servicing, and external data integrations.
- Refactored older screens, services, and shared libraries that mixed business rules with presentation logic, improving maintainability and reducing regression bug leakage by **29%** across three major release cycles.
- Built service and API integrations for payments, CRM, identity, notifications, and reporting providers, handling **duplicate callbacks, schema drift, partial outages, retries, and reconciliation** without losing customer activity.
- Fixed production memory and worker stability issues by profiling retained objects, closing database cursors, limiting batch size, and introducing safer queue-processing controls for long-running jobs.
- Optimized reporting and search workloads through **composite indexes, query rewrites, cached summaries, asynchronous generation, and defensive timeouts**, stabilizing response times as customer records grew.
- Migrated older modules toward modern runtime, dependency, and build standards while preserving backward-compatible API contracts for dependent clients and scheduled enterprise releases.
- Expanded automated validation with **component tests, API tests, contract fixtures, browser tests, and release smoke suites**, reducing manual QA bottlenecks and catching provider response changes earlier.
- Partnered with architects, product managers, QA, and client stakeholders to split large modernization initiatives into smaller releases with measurable acceptance criteria, release notes, and support documentation.

SimbirSoft Company

Software Developer

Boston, MA

Mar 2015 - Jun 2018

- Built enterprise workflow, e-commerce, and internal operations modules using **Selenium, Java, JUnit, TestNG, Postman, SQL validation, Jenkins jobs, and manual-to-automated regression suites** with **SQL databases, REST APIs, queues, and CI builds**, supporting approvals, orders, notifications, imports, and reporting.
- Replaced brittle server-rendered and script-heavy flows with cleaner application modules, improving task completion speed by **24%** for operations users working through repetitive approval and data-entry processes.
- Implemented service-layer validation, transaction boundaries, and database constraints that corrected duplicate submissions, inconsistent statuses, and race conditions caused by browser retries or concurrent updates.
- Assisted modernization from manual deployments and tightly coupled code into **repeatable builds, environment profiles, automated tests, structured logging, and safer release packages** across staging and production.
- Improved slow database-backed screens through **index reviews, query tuning, pagination, selective caching, and explain-plan analysis**, reducing support complaints tied to large customer and catalog tables.
- Created REST endpoints and background jobs for notifications, file imports, invoice synchronization, and status tracking while adding error queues and replay scripts for failed integrations.
- Worked with QA, analysts, and senior engineers to clarify requirements, investigate production defects, write integration tests, and document root causes for recurring customer-impacting issues.

Microsoft

Software Developer Intern

Cambridge, MA

Aug 2014 - Feb 2015

- Contributed to internal developer productivity and reporting tools using **C#, ASP.NET MVC/Web API, JavaScript, TypeScript, SQL Server, and browser-based internal tools**, supporting SQL-backed services, administrative dashboards, validation rules, data exports, and workflow automation for engineering teams.
- Implemented searchable grids, export utilities, form validation, and role-aware visibility rules that helped internal users review operational data and complete routine support tasks more efficiently.
- Investigated defects in data access, validation, and workflow-state handling by reproducing failures, comparing expected outcomes, and preparing fixes reviewed by senior engineers before merge.
- Added unit and integration tests around controller logic, utility classes, SQL queries, and edge-case validation, strengthening regression coverage for tools that had relied heavily on manual checking.
- Participated in code reviews, daily standups, release readiness checks, and design discussions, gaining production-minded engineering habits around maintainability, reliability, and secure implementation.
- Documented setup steps, API assumptions, troubleshooting notes, and known limitations so future interns and full-time engineers could onboard faster and maintain the internal tools confidently.

Selected Projects

Enterprise Test Automation Platform

- Built an automation framework using **Appium, Detox, Espresso, XCTest, mobile automation, device farms**, API fixtures, browser coverage, mobile coverage and performance hooks, test data management, and CI reporting for release risk visibility.

CI Quality Gate and Regression Reduction Program

- Implemented quality gates with flaky-test analytics, parallel execution, contract tests, smoke suites, defect tagging, and release dashboards that improved confidence in frequent deployments.

Certifications

- ISTQB Certified Tester - Advanced Level Test Automation Engineer
- AWS Certified Developer - Associate
- Professional Scrum Developer I (PSD I)
- Certified Kubernetes Application Developer (CKAD)
- Postman API Fundamentals Student Expert

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science, 2010 - 2014
