

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-330682401/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Python/Django backend engineer with over 8 years of experience designing and scaling web applications, RESTful APIs, and asynchronous systems. Proven track record in developing CRM platforms, integrating Celery for background task execution, and optimizing PostgreSQL databases. Adept at CI/CD pipelines, test automation, and system design. Strong communicator and critical thinker with a passion for clean code, scalability, and collaborative problem-solving.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, SQL, Bash
- **Frameworks/Libraries:** Django, FastAPI, Celery, DRF, GraphQL, Pytest
- **Databases:** PostgreSQL, MySQL, Redis
- **DevOps & Tools:** Git, GitFlow, Docker, CI/CD (GitHub Actions, Jenkins), Prometheus, Grafana, Sentry
- **Cloud & Messaging:** Azure, GCP, RabbitMQ, OAuth2, JWT
- **Testing:** Unit & Integration Testing, Pytest, FactoryBoy
- **Other:** REST APIs, AsyncIO, Clean Architecture, DDD principles

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2025

Timișoara, Romania

- Engineered and maintained Django-based CRM systems, implementing full-feature pipelines from lead ingestion to sales lifecycle automation with asynchronous job execution using Celery.
- Developed complex import/export modules to support automated client data migration with deduplication, validation logic, and recovery mechanisms for fault tolerance.
- Spearheaded design and development of modular APIs using Django REST Framework and GraphQL, enabling flexible data consumption for frontend and external integrations.
- Optimized PostgreSQL queries, added indexing strategies, and fine-tuned schema migration to reduce latency in CRM data retrieval and reporting dashboards.
- Integrated third-party services like Twilio and SendGrid for real-time customer communication via email/SMS, supporting campaign automation within the CRM system.
- Devised scalable job orchestration for scheduled marketing tasks using Celery beat, prioritizing retries and parallel processing for performance-critical operations.
- Established and enforced CI/CD pipelines using GitHub Actions and Docker, reducing manual deployment errors and increasing release frequency across environments.

- Led code reviews, architectural discussions, and enforced clean coding practices, fostering a high-performance engineering culture centered on continuous improvement.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Contributed to a marketing automation backend system that handled over 1M customer records daily, integrating with PostgreSQL and Redis for high-availability processing.
- Implemented REST APIs for campaign creation, lead scoring, and contact management, aligning with JWT/OAuth2 for secure client access and data isolation.
- Developed asynchronous job queues via Celery and RabbitMQ to handle data enrichment, campaign triggering, and analytics generation in near real-time.
- Collaborated with frontend and QA teams to deliver testable, scalable solutions using TDD principles, extensive Pytest coverage, and feature-driven development.
- Designed role-based access control logic for multi-tenant environments, enabling granular permissions across marketing, sales, and analytics teams.
- Conducted performance tuning on Django ORM and raw SQL operations, reducing dashboard query load times by over 50% under peak usage.
- Led migration efforts to introduce GCP for containerized staging environments, enhancing team collaboration and deployment transparency.
- Participated in daily scrums, sprint planning, and backlog grooming while actively mentoring junior engineers on Python best practices and system design.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed internal tools and CRM extensions using Django and jQuery to track partner leads, manage deals, and auto-generate sales reports for executive stakeholders.
- Built integration workflows with external systems through REST/GraphQL APIs, including legacy CRMs, invoicing systems, and marketing analytics platforms.
- Designed and scheduled asynchronous data pipelines to ingest large CSV/JSON files daily, validate business rules, and reconcile data into a unified PostgreSQL model.
- Created an automated testing suite with Pytest and Selenium for backend validation and integration scenarios, improving regression catch rate by over 70%.
- Contributed to Docker-based development environments and implemented CI build jobs for QA teams using Jenkins pipelines and Git hooks.
- Set up role-based admin dashboards with custom views, permission logic, and inline data editing for non-technical marketing personnel.
- Documented REST endpoints and database schemas using Swagger/OpenAPI and Confluence, promoting transparency across technical and business units.
- Promoted best practices in GitFlow-based version control and led internal training on code reviews, branching strategy, and CI debugging.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Maintained Django-based client platforms focused on B2B CRM and data synchronization between internal and partner databases.
- Implemented authentication with JWT and session management for secure multi-user portals and integrated role-level authorization layers.
- Enhanced asynchronous email triggers for sales events using Celery, increasing delivery consistency and offloading real-time backend pressure.
- Troubleshoot PostgreSQL lock conflicts, optimized database structure, and participated in schema versioning for iterative feature development.
- Contributed to analytics modules that aggregated user activity and sales conversions, using raw SQL and Django ORM aggregation tools.
- Participated in agile ceremonies, including daily standups and sprint retrospectives, maintaining delivery pace and cross-functional transparency.
- Wrote unit tests with coverage reports and enforced pre-commit hooks for linting, enhancing code quality assurance across the team.
- Facilitated internal documentation updates, providing onboarding support for new hires transitioning into the backend domain.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Supported CRM system development for internal operations using Django and PostgreSQL, building modules for client tracking and support ticketing.
- Assisted with debugging Celery tasks for email dispatch and status monitoring, learning principles of async processing and retry logic.
- Contributed to API development for mobile integrations using DRF and JWT, enabling cross-platform support for sales representatives.
- Collaborated in code review and learned to write effective unit tests with Pytest under the guidance of senior developers.
- Participated in database indexing strategy sessions to improve reporting module speed and join performance.
- Documented core functionality for end-user manuals and updated developer README files for open-source reuse.
- Created interactive charts and dashboards using Chart.js and Django templates, enhancing user experience on reporting pages.
- Practiced Agile methodology and version control via Git, learning branching, rebasing, and tagging for production releases.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Django for Professionals – William S. Vincent (2023)
- ❖ Backend Development with Python and Django – Coursera (2022)

- ❖ PostgreSQL Performance Tuning & Optimization – Udemy (2021)
 - ❖ Celery in Practice: Asynchronous Python Tasks – Pluralsight (2020)
-

PROJECTS

✓ **Global CRM Automation Platform**

- Designed and developed a CRM from scratch with Django, supporting lead capture, sales pipeline management, and campaign automation.
- Integrated Celery for asynchronous job processing, scheduled campaigns, and bulk email dispatch with retry and status tracking features.
- Developed REST and GraphQL APIs for modular frontend and third-party integrations, serving over 10K users across multiple geographies.

✓ **Scalable Lead Deduplication Engine**

- Built a deduplication service for large-scale CSV imports using PostgreSQL CTEs, fuzzy matching algorithms, and async job queues with Celery.
- Achieved 90% reduction in duplicate entries and increased onboarding speed for new clients by automating pre-ingestion data cleansing.
