

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522
<https://www.linkedin.com/in/taylor-pentz-10a92a3aa>

Professional Summary

Senior Software Engineer with 10+ years of full-stack experience across mobile, backend, and cloud platforms. Proven track record leading cross-functional teams to deliver scalable, secure, and high-performance applications. Expertise in iOS/Android native development, Azure-based architecture, Kafka pipelines, and microservices using Node.js and TypeScript. Adept at translating business goals into technical outcomes while mentoring global engineering teams. Passionate about clean code, platform architecture, and continuous improvement.

Technical Skills

- ❖ **Languages & Frameworks:** JavaScript, TypeScript, Node.js, Swift, Kotlin, Java, Objective-C, PHP, Python, C#
- ❖ **Mobile:** iOS (Swift/Obj-C), Android (Kotlin/Java), React Native
- ❖ **Cloud & DevOps:** Azure, AWS, GCP, CI/CD, Docker, Kubernetes
- ❖ **Databases:** Cosmos DB, SQL Server, PostgreSQL, MongoDB, Redis, DynamoDB
- ❖ **Messaging & Integration:** Kafka, RESTful APIs, GraphQL, WebSockets, Azure Event Grid
- ❖ **Testing & Tools:** Jest, Mocha, Detox, Xcode, Android Studio, Git, Jenkins, Jira
- ❖ **Architecture:** Microservices, Event-driven, Cloud-native, API-first

Professional Experience

SumatoSoft

Senior Software Engineer
Boston, MA (Remote) | Apr 2023 – Mar 2025

- Led the architecture, development, and deployment of hybrid mobile solutions using React Native, Swift, and Kotlin that scaled to 200K+ monthly users across North America.
- Designed and implemented microservices using Node.js and TypeScript, integrating Kafka for event streaming and Cosmos DB for distributed data persistence.
- Mentored an offshore development team of 6 engineers, establishing best practices in testing, CI/CD, and code quality through regular code reviews and retrospectives.
- Migrated critical components from monolith to cloud-native services on Azure Kubernetes Service (AKS), reducing latency by 30% and enhancing system maintainability.
- Spearheaded the rollout of an authentication gateway using Azure Mobile Gateway and Azure AD B2C, securing mobile access for all applications.
- Developed and enforced component-based architecture guidelines across teams, aligning with platform engineering principles and business strategies.
- Partnered with cross-functional stakeholders to define OKRs, improve observability (New Relic, Azure Monitor), and reduce production incidents by 45%.

- Pioneered mobile performance tuning sessions using Xcode Instruments and Android Profiler, reducing app load times by 40% across platforms.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Delivered robust enterprise applications by integrating Cosmos DB and Azure Functions, streamlining financial workflows for Fortune 500 clients.
- Built scalable RESTful APIs with Node.js and Express, powering real-time dashboards and reporting tools with Kafka as the backbone of event ingestion.
- Implemented robust CI/CD pipelines with Azure DevOps, Docker, and Helm, enabling reliable deployments across staging and production environments.
- Co-led cross-border teams in sprints and PI planning, translating complex business requirements into scalable architecture across mobile and web.
- Developed and launched mobile-first solutions using React Native integrated with custom native modules in Swift and Java for high-performance requirements.
- Orchestrated data migration strategies from legacy SQL databases to Cosmos DB with minimal downtime, ensuring high availability during cutover.
- Participated in platform refactoring that aligned with modern DDD and hexagonal architecture principles for improved testability and modularity.
- Collaborated with data engineers to build real-time analytics pipelines using Kafka streams and Azure Event Hubs, increasing decision-making speed by 60%.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Created custom hybrid mobile solutions using Cordova and early React Native for logistics and healthcare clients with critical offline-first needs.
- Developed backend APIs using Node.js and PostgreSQL to support scheduling and messaging features across various business verticals.
- Enhanced system integration using Kafka for decoupled communication between services, improving system resilience and observability.
- Maintained infrastructure on AWS (EC2, Lambda, S3) and transitioned services to containers using Docker and ECS.
- Refactored monolithic apps into modular microservices, applying domain-driven design and CQRS patterns to isolate critical business functions.
- Automated test coverage using Mocha and Jest, improving release confidence and reducing regressions during agile sprints.
- Contributed to UI design systems with React and Redux, ensuring consistent UX across mobile and desktop interfaces.
- Trained and mentored new hires in JavaScript, API design, and Agile methodology, accelerating onboarding and productivity.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Prototyped features for Office Mobile using Swift and Objective-C that were later incorporated into the production build for iOS and Android.
- Conducted performance benchmarking and crash analysis using Xcode and Android Studio tools to identify memory leaks and UI bottlenecks.
- Built internal debugging utilities for dev teams, significantly improving turnaround time for identifying production issues.
- Collaborated with product and QA to write unit and UI tests ensuring stability across multiple device types and OS versions.
- Authored internal documentation for onboarding mobile engineers, improving consistency and transfer of institutional knowledge.
- Contributed to accessibility enhancements for Office Mobile, ensuring compliance with WCAG 2.1 and improving usability for screen readers.
- Integrated telemetry tracking using internal Microsoft analytics stack to measure feature engagement across user cohorts.
- Presented final internship demo to senior leadership team, earning early conversion offer for full-time position.

Projects

Cross-Platform Telehealth App

- Developed a HIPAA-compliant mobile telehealth solution using React Native, Swift modules, and Kafka event streaming with Cosmos DB on Azure cloud infrastructure.
- Implemented biometric authentication, secure video streaming, and offline mode, achieving 98% user satisfaction score over 6 months.

Azure-Based Event Processing Engine

- Led design and implementation of a Kafka + Cosmos-powered event ingestion pipeline, handling 10M+ messages/day with zero downtime.
- Integrated with Azure Event Grid and Functions to enable near-real-time data processing and alerting system.

Certifications

- **Microsoft Certified: Azure Developer Associate**
- **AWS Certified Solutions Architect – Associate**
- **Google Cloud Certified – Associate Cloud Engineer**
- **Certified Kubernetes Application Developer (CKAD)**

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
