

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522
<https://www.linkedin.com/in/taylor-pentz-10a92a3aa>

Professional Summary

Seasoned Senior Software Engineer with 9+ years of experience designing and developing enterprise-grade web applications and services across SaaS, marketing tech, and finance domains. Adept at building scalable full-stack solutions using TypeScript, Node.js, PostgreSQL, and modern frameworks like React and Vue. Proven success delivering high-impact features, optimizing system performance, integrating third-party APIs, and mentoring junior engineers. Experienced in Agile teams and passionate about clean architecture, dev productivity, and end-user experience.

Technical Skills

- ❖ **Languages & Frameworks:** TypeScript, JavaScript, PHP, Node.js, Vue.js, React, GraphQL, REST, HTML5, CSS3, SCSS, Bootstrap
- ❖ **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB
- ❖ **Cloud & DevOps:** AWS (Lambda, S3, ECS, RDS), GCP (Firestore, Cloud Functions), Docker, Kubernetes, GitHub Actions, CI/CD
- ❖ **Architecture & Tools:** Microservices, Serverless, WebSockets, Redis, Prisma, Sequelize, Kafka, RabbitMQ
- ❖ **Testing & QA:** Jest, Cypress, Mocha, Postman
- ❖ **Development Practices:** Agile, Scrum, Pair Programming, TDD, Clean Code, DDD
- ❖ **Other Tools:** Git, Jira, Notion, Figma, Datadog, Grafana, LogRocket

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Spearheaded development of a real-time customer segmentation engine using Node.js, TypeScript, PostgreSQL, and Redis, supporting over 100k concurrent users with zero downtime.
- Designed and implemented a GraphQL API for a marketing analytics dashboard, reducing API response time by 40% and increasing developer productivity.
- Architected multi-tenant backend services using NestJS and Docker, enabling seamless onboarding of new clients and reducing infrastructure cost by 20%.
- Integrated several external APIs (Salesforce, SendGrid, Twilio) and built resilient failover mechanisms with exponential backoff and error logging.
- Developed role-based access control and session management with JWT, OAuth2, and refresh token strategy across distributed systems.
- Led performance profiling and implemented caching strategies, which improved backend throughput by 3x during peak hours.

- Mentored 5+ junior developers through pair programming, design reviews, and weekly tech knowledge shares, enhancing team performance and collaboration.
- Collaborated with CTO and product managers to shape technical roadmap, ensuring alignment with business goals and quarterly OKRs.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Built scalable web applications using Vue.js for front-end and Express.js with PostgreSQL on the backend, powering insurance tech platforms with 1M+ user data entries.
- Developed complex GraphQL resolvers for dynamic data retrieval and aggregation, enhancing in-app reporting and dashboard capabilities.
- Refactored legacy REST APIs to GraphQL architecture with modular schema stitching and caching, resulting in 35% faster client response times.
- Designed and implemented PostgreSQL schemas with indexing, partitioning, and normalization to ensure data integrity and performance at scale.
- Integrated third-party services (Stripe, Plaid, DocuSign) with secure OAuth2 protocols, reducing compliance risks and improving user onboarding.
- Enhanced logging and alerting using Datadog, Sentry, and Prometheus, enabling proactive issue detection and response.
- Took ownership of CI/CD pipelines using GitHub Actions and Docker containers to automate testing, linting, and deployment.
- Participated in Agile ceremonies and collaborated with cross-functional teams to ship weekly feature releases on time and within scope.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Developed high-performance backend services in Node.js and integrated frontend using Vue.js and Webpack for enterprise insurance systems.
- Wrote and optimized complex PostgreSQL queries and stored procedures, supporting transactional workflows with ACID compliance.
- Led development of role-specific dashboards with data visualization components, increasing client retention by 22% through better UX insights.
- Created and maintained internal component libraries for shared use across apps, reducing development time by 40% in new projects.
- Participated in system design and architectural reviews to establish modular, scalable, and maintainable codebases.
- Implemented real-time notification systems using WebSockets for live policy updates, improving customer communication metrics.
- Collaborated with QA team to build E2E test suites using Cypress and ensured >90% test coverage on key modules.
- Trained new hires and contributed to onboarding documentation to scale engineering team effectively.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Contributed to internal tools for Azure VM provisioning automation using PowerShell and .NET scripts.
- Implemented data visualization components in JavaScript to analyze infrastructure health metrics.
- Documented internal APIs and developed CLI tool for cloud environment diagnostics used by support teams.
- Worked closely with senior engineers to debug distributed systems and propose improvement strategies.
- Attended daily standups, sprint planning, and contributed to sprint retrospectives with insights and feedback.
- Refactored legacy modules with better error handling and logging capabilities, improving maintainability.
- Participated in security review for internal services and contributed to threat model analysis.
- Received internship performance award for initiative and ownership during the Azure diagnostic tool migration.

Projects

Real-Time Marketing Dashboard (2023)

- Built full-stack data visualization platform using Vue.js, GraphQL, and PostgreSQL; included drag-and-drop widgets, saved filters, and real-time updates via WebSockets.

Event-Driven Wealth Management System (2021)

- Led backend design of a Kafka-based portfolio alerting system that processed 5M+ events daily. Implemented rules engine for proactive client engagement and risk management.

Serverless Invoicing System (2020)

- Designed and deployed AWS Lambda-based microservice to generate and send invoices in PDF via email, integrated with S3 and SES, used by over 500 vendors monthly.

Certifications

- AWS Certified Solutions Architect – Associate
- Google Cloud Associate Cloud Engineer
- GraphQL Advanced API Design – Udemy
- PostgreSQL Performance Tuning – Pluralsight
- Full-Stack JavaScript Development with Node.js and Vue – Coursera

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
