

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522
<https://www.linkedin.com/in/taylor-pentz-10a92a3aa>

Professional Summary

Highly skilled and motivated Software Engineer with over 9 years of experience designing, developing, and optimizing scalable applications across mobile and backend ecosystems. Specialized in **React Native mobile development**, with deep expertise in cross-platform app delivery, state management, performance optimization, and native Android/iOS integrations. Strong background in **JavaScript, TypeScript, GraphQL, and Node.js**, combined with proven experience leveraging **AWS, GCP, Docker, SQL, and NoSQL** for modern, cloud-enabled application delivery. Adept at collaborating with cross-functional teams, driving Agile workflows, mentoring engineers, and delivering robust, secure, and production-ready software.

Technical Skills

- ❖ **Languages & Frameworks:** React Native, React, JavaScript (ES6+), TypeScript, Node.js, GraphQL, Redux, Context API, Java/Kotlin, Swift, Objective-C
- ❖ **Mobile & Native:** Custom Native Modules, i18n Localization, Mobile Build Tools (Xcode, Android Studio, Gradle, Fastlane)
- ❖ **Cloud & DevOps:** AWS, GCP, Docker, Firebase, CI/CD Pipelines
- ❖ **Databases:** SQL (PostgreSQL, MySQL, MSSQL), NoSQL (MongoDB, DynamoDB, Redis)
- ❖ **Testing & QA:** Jest, React Testing Library, Detox, Cypress
- ❖ **Other Expertise:** API Integration, Monorepo & npm package management, Agile/Scrum, Performance Optimization, Security Best Practices

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Designed, developed, and deployed cross-platform React Native applications with TypeScript, ensuring consistent performance and UI/UX across iOS and Android environments.
- Built and integrated advanced state management with Redux and Context API, significantly enhancing application reliability and reducing bugs in production environments.
- Implemented GraphQL API integrations using Apollo Client, enabling highly efficient data queries and offline caching strategies that improved app responsiveness.
- Developed and maintained CI/CD pipelines with Docker and Fastlane to automate build, test, and deployment processes for mobile applications across environments.
- Collaborated with backend teams leveraging Node.js for troubleshooting API bottlenecks and ensuring smooth connectivity between services and mobile clients.
- Integrated mobile app security best practices, including secure storage, encrypted API calls, and authentication workflows to protect sensitive data.

- Optimized application performance by profiling and debugging native modules, reducing memory leaks, and ensuring smooth animations and UI rendering.
- Mentored junior engineers in React Native development, code reviews, and Agile practices, elevating overall team efficiency and technical knowledge.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Delivered high-performance mobile solutions by building React Native applications with robust state management, ensuring long-term maintainability.
- Integrated Node.js microservices and APIs with mobile apps to deliver real-time features, including notifications, user analytics, and dynamic content delivery.
- Designed and executed GraphQL queries and mutations using Apollo Client, improving API interaction efficiency and mobile application scalability.
- Implemented Docker-based environments for consistent development workflows, enabling smooth CI/CD integration with AWS cloud infrastructure.
- Built reusable UI components and modules with TypeScript, ensuring consistent user experience and reducing development duplication.
- Introduced localization (i18n) strategies to deliver mobile apps supporting multiple languages and regions with seamless integration.
- Collaborated with designers and QA engineers to build and refine pixel-perfect UI/UX features that aligned with user requirements and client expectations.
- Enhanced mobile security by applying OAuth 2.0, secure tokens, and encrypted storage solutions, improving compliance with data privacy standards.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Built mobile and web solutions using React Native, React, and Node.js, contributing to full-stack application delivery in Agile team environments.
- Implemented modular and scalable state management solutions with Redux, improving application maintainability across multiple client projects.
- Designed relational and non-relational database schemas (PostgreSQL, MongoDB) for mobile applications requiring complex querying and offline support.
- Improved mobile app performance by optimizing GraphQL queries and caching strategies, reducing network overhead and boosting responsiveness.
- Contributed to CI/CD automation pipelines using Docker and Jenkins to streamline deployments to staging and production.
- Integrated native Android and iOS modules, enabling custom functionality where cross-platform solutions required additional native capabilities.
- Applied secure coding standards and conducted peer code reviews to ensure maintainability, scalability, and adherence to industry best practices.
- Partnered with QA engineers to implement Jest and Detox test suites, improving defect detection and reducing regression in releases.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Contributed to prototype mobile solutions using JavaScript and early versions of React Native, gaining exposure to cross-platform application development.
- Implemented experimental APIs in Node.js, testing integration with SQL databases to validate performance and reliability under simulated workloads.
- Assisted senior developers with debugging and performance optimization of mobile modules, improving execution speed and reducing crash frequency.
- Documented development processes and contributed to team knowledge sharing, ensuring consistent coding and testing practices.
- Explored cloud deployment models with early Azure services, helping evaluate feasibility for mobile application hosting.
- Participated in Agile sprints, contributing to story estimation, backlog grooming, and demo sessions with stakeholders.
- Supported QA teams by writing unit tests and assisting with manual testing workflows, gaining practical experience in quality assurance processes.
- Collaborated with engineers across multiple disciplines, enhancing understanding of cross-functional teamwork in large-scale software delivery.

Projects

- **E-Commerce Mobile Platform:** Delivered a scalable React Native e-commerce app with GraphQL integration, secure checkout, and AWS-based backend services.
- **Health & Fitness App:** Built cross-platform mobile app supporting personalized workouts and nutrition tracking with GCP backend APIs.
- **Finance Tracking App:** Designed and deployed a mobile app with real-time transaction tracking, leveraging SQL and NoSQL databases with Dockerized backend.

Certifications

- AWS Certified Developer – Associate
- Google Cloud Certified – Professional Cloud Developer
- Microsoft Certified: Azure Fundamentals
- Docker Certified Associate

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
