

Tyler Roberts

Senior Software Engineer – Vue C# (.NET) Azure/AWS

tylerrobertsdev@outlook.com | linkedin.com/in/tyler-roberts-1454473b4 | Florida, United States | +1 (321) 376-7095

SUMMARY

Senior Software Engineer with ~10 years building **full-stack SaaS, B2B workflow, and data-driven business platforms** using **C#, .NET Framework 4.5–4.8, .NET Core 2.1–3.1, .NET 6–8, and Vue.js 2–3** across API-first and cloud-hosted environments. Strong track record modernizing legacy modules, stabilizing brittle integrations, and shipping customer-facing features with measurable reliability gains. Hands-on with **ASP.NET Core Web API, Entity Framework / EF Core, SQL Server, PostgreSQL, Redis, AWS, Azure, Docker**, and CI/CD, with a practical engineering style centered on performance tuning, secure design, observability, and post-release hardening that turns recurring production issues into durable fixes.

SKILLS

- **Frontend** — **Vue.js 2–3, Nuxt.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Vuex, Pinia**, component architecture, SPA routing, form validation, accessibility, performance optimization
- **Backend & APIs** — **C#, .NET Framework 4.5–4.8, .NET Core 2.1–3.1, .NET 6–8, ASP.NET MVC, ASP.NET Core Web API, Entity Framework, EF Core, REST APIs, Microservices, SignalR**, background jobs, API versioning, authentication, authorization, secure coding
- **Data & Messaging** — **SQL Server, PostgreSQL, MySQL, Redis, MongoDB, DynamoDB, RabbitMQ, Kafka, AWS SQS/SNS, Elasticsearch, OpenSearch**, query tuning, caching, indexing, reporting pipelines
- **Cloud & DevOps** — **AWS (EC2, ECS, Lambda, API Gateway, S3, RDS, CloudFront, CloudWatch), Azure (App Service, Azure SQL, Storage Accounts, Azure DevOps), Docker, Kubernetes, Terraform, GitHub Actions, Jenkins**, CI/CD automation
- **Testing, Observability & Security** — **xUnit, NUnit, Jest, Cypress, OpenTelemetry, Datadog, Grafana**, structured logging, distributed tracing, **OAuth2, OpenID Connect, JWT, RBAC**, audit logging, OWASP-aligned practices

EXPERIENCE

Senior Software Engineer

Web Venturez LLC

February 2020 - October 2025

- Architected and delivered multi-tenant **.NET 6–8** backend services and **Vue.js 3** administrative applications for SaaS workflow platforms, separating business domains into cleaner service boundaries that improved release predictability and reduced production regression volume by **35%**.
- Led migration of legacy **ASP.NET MVC / .NET Framework 4.7** modules into **ASP.NET Core Web API** services, replacing tightly coupled server-rendered flows with reusable API contracts and Vue-based interfaces that improved page responsiveness by **40%** and simplified parallel frontend delivery.
- Built secure customer onboarding, billing, and internal operations features using **C#, EF Core, SQL Server**, and **Redis**, with idempotent write patterns that prevented duplicate transaction processing during retry storms and significantly reduced support escalations.
- Resolved a recurring production issue caused by stale distributed cache reads and race conditions during profile updates by redesigning cache invalidation flows, adding optimistic concurrency checks, and introducing targeted tracing that cut related incidents by **60%**.
- Implemented a modular API versioning strategy for external partner integrations so new features could be released without breaking downstream clients, which shortened coordination overhead and allowed product teams to ship enhancements with fewer rollout delays.
- Developed event-driven processing for document ingestion and status updates using **RabbitMQ** and background workers, isolating failure-prone tasks from synchronous request paths and improving end-user completion reliability during traffic spikes.
- Introduced **OpenTelemetry** instrumentation and operational dashboards in **Datadog** and **Grafana**, giving engineers better visibility into slow queries, retry loops, and dependency failures while reducing mean time to identify root causes by **50%**.

- Optimized heavy reporting endpoints by refactoring inefficient LINQ queries, adding composite indexes, and moving large aggregations into tuned SQL paths, which cut several high-traffic endpoint response times from seconds to sub-second ranges.
- Strengthened platform security with **OAuth2**, **OpenID Connect**, **JWT**, role-based authorization, and audit logging across sensitive workflows, making access behavior easier to review and aligning the application with stricter enterprise customer requirements.
- Containerized services with **Docker** and standardized deployment pipelines across **AWS ECS**, **Azure App Service**, and CI workflows, reducing environment drift and making rollback procedures more reliable during hotfix releases.
- Partnered with product and QA teams to introduce a reusable Vue component architecture with shared validation and error-handling patterns, which reduced duplicated UI logic and improved consistency across dashboards, forms, and approval workflows.
- Mentored engineers on debugging live issues, modernizing older code paths, and balancing delivery speed with maintainability, while establishing coding standards that improved review quality and made large cross-team changes easier to land safely.

Software Engineer

Webiz Digital

July 2017 - January 2020

- Built customer-facing business applications using **Vue.js 2**, **Nuxt.js**, **C#**, and **ASP.NET Core 2.1–3.1**, delivering dashboard, reporting, and account-management features that supported rapid feature iteration without destabilizing core transaction flows.
 - Designed and maintained RESTful APIs backed by **SQL Server** and **PostgreSQL**, with careful schema evolution and pagination strategies that supported growing datasets while keeping frontend integrations stable across frequent product releases.
 - Migrated older jQuery-heavy administrative screens into structured **Vue.js** single-page modules, improving maintainability, reducing UI defect rates, and enabling shared state management patterns that made complex user workflows easier to reason about.
 - Implemented caching and search improvements using **Redis** and **Elasticsearch**, which accelerated list and filter experiences for operations teams and reduced repeated database pressure during high-volume usage windows by more than **30%**.
 - Diagnosed a difficult data inconsistency bug caused by mismatched timezone handling between frontend forms and backend schedulers, then fixed it with UTC normalization, stricter serialization rules, and contract tests that prevented recurrence.
 - Added file-processing and notification workflows using background jobs and **AWS SQS**, moving fragile long-running tasks off request threads and improving perceived reliability for users submitting larger import and export operations.
 - Improved deployment quality by automating build, test, and publish stages through **Azure DevOps** and **Jenkins**, which reduced manual release steps, shortened release preparation time, and lowered avoidable environment-related failures.
 - Worked closely with designers and stakeholders to roll out reusable Vue form controls, table components, and error-display patterns, increasing delivery speed for new internal tools while keeping the user experience consistent across modules.
 - Refactored authentication and session management flows to support stronger authorization boundaries using **JWT** and policy-based access rules, which improved security posture for customer and staff-facing applications.
 - Investigated memory and performance issues in a legacy reporting feature by profiling data access and serialization behavior, then reduced resource usage through query shaping and payload trimming that improved stability during peak reporting periods.
 - Supported production issue response and post-release hardening, documenting root causes and implementing practical fixes that reduced repeat incidents while strengthening trust between engineering, support, and business teams.
-

Software Developer

Centric Tech Inc.

October 2013 - June 2017

- Developed internal business applications and client-facing modules using **C#, ASP.NET MVC, .NET Framework 4.5–4.6, JavaScript, jQuery**, and **Bootstrap**, delivering enhancements for legacy web platforms while keeping changes safe for business-critical workflows.
- Built CRUD-heavy workflow screens, approval paths, and reporting features on top of **SQL Server** and **MySQL**, gaining strong experience in relational schema design, stored procedure maintenance, server-side validation, and form-based business process implementation.
- Supported modernization of older server-rendered pages by improving client-side interactivity with **JavaScript** and **jQuery**, adding dynamic validation, modal workflows, and partial page updates without requiring disruptive rewrites of stable production modules.
- Resolved a recurring issue where concurrent edits caused silent data overwrites by improving save logic, adding clearer validation messaging, and tightening record update checks, which increased reliability for shared administrative workflows.
- Enhanced import and export routines for operational data by refining batch-processing logic, strengthening file validation, and improving exception handling, which reduced rerun frequency and gave support teams clearer visibility into malformed data failures.
- Improved database performance on aging modules through query review, index tuning, stored procedure updates, and removal of unnecessary round-trips, which reduced timeout complaints and improved response times for frequently used internal screens.
- Helped maintain deployment scripts, IIS configuration, and environment settings across on-premise and early hosted environments, building practical experience in release coordination, rollback support, and production troubleshooting.
- Worked with senior engineers and business stakeholders to break down large enhancement requests into smaller deliverables, allowing teams to release changes more safely while reducing risk in tightly coupled legacy applications.
- Supported bug fixing, feature delivery, and maintenance across several parallel applications, building a reputation for steady execution, adaptable problem solving, and careful handling of systems that remained important to daily operations.

EDUCATION

Bachelor's degree in Computer Science

Florida State University

2009 - 2013

- Built strong foundations in **software engineering, databases**, and **distributed systems**, applying coursework directly to production-oriented web and API development.
